# ABSTRACT

---

With day by day many crypto currencies getting into the market, blockchain technology is becoming the future of our financial needs. [AIT Coin](#) started from a simple idea, born from a tale of personal hands-on frustration using current offerings in crypto-payment systems and our desire to build a better platform. After condensing the original concept into a pitch presentation, we relentlessly reached out to interested partners and organically built our team. Along this journey, we found great partners and mentors who were strongly committed and excited to work with the ever-progressing vision of [AIT Coins](#).

The aim of [AIT Coins](#) is to create hot test launch on Binance Smart Chain and bring on hype and mass adoption in order to create a full blockchain protocol.

Drawing comparisons to the meteoric rise of the modern web, blockchain technology has shown signs of tremendous growth potential and transformative power. Just as the internet needed Web 2.0 to engage users with more social, usable, and interoperable functionality, blockchain technology's path to mass adoption hinges upon creating a seamless user experience. While the industry is still young and the potential of decentralized applications remains largely untapped, the [AIT Coin](#) is positioned on the Binance Smart Chain with its revolutionary DApp experiences.

[AIT Coins](#) is an asset exchange platform will be combined with strong crypto technology in collaboration with modern banking partners in an seamless digital ecosystem.

# INTRODUCTION

## AIT COIN - A Cryptocurrency For Daily Life

The adoption of blockchain technology in the global marketplace is not simply a temporary trend or fashion, but a firm and continuous shift towards a future in which the management of personal, institutional and potentially state finances will become easier, straightforward, quicker and more transparent. Two of the applications of this technology, crypt currency and tokens, stand out in popularity. Such instruments are convenient for a global society because they allow greater efficiency, speed and freedom in all types of transactions, especially for international trade.

Its use has generated a universe of opportunities that have the potential to alter conventional business practices, especially in industries based on intermediation for exchange or verification, such as finance, trade, manufacturing and even in areas of human knowledge that usually adopt technological innovations in longer terms, such as law and politics.

The development of the crypto asset ecosystem is based on the revolutionary idea of technological substitution of trust. The work model on which they are based emerged as an ingenious mechanism that combines networks, computing power and incentives for collaborative work to ensure the integrity of information, long with traceability and transparency in exchanges. Additionally, since it places the management of financial resources directly in people's hands, it proposes a different approach to electronic finance security.

AIT Coin is breaking in with a promising outlook, taking advantage of:

- The early maturity of blockchain technology
- A market of more than thirty million people eager for savings, investment and international exchange instruments
- A world-renowned oil industry
- The participation of allied governments
- Enthusiastic promoters of crypto currency for the development of a new world wide economy

# INTRODUCTION

AIT Coin will have the capacity to overcome blockages, delays and limitations of the traditional financial system, favoring the growth of a new economic ecosystem based on trust, integrity, transparency, efficiency and speed that guarantees the technology of blockchain.

The objective of this document is to describe the technical foundations of AIT Coin's development as an instrument for exchange, savings, investment and technological platform. The following will establish the historical-social and economic bases that inspire the development of the instrument, the structure of the global and national market in which it will be used, the issue method and policies that will consolidate its use are set out below.

The combination of this historical background and the international recognition of the enormous potential of new technologies underpin the idea of AIT Coin as an international currency developed and promoted by an emerging nation for the development of a decentralized, more egalitarian, inclusive and transparent global economy.

## PROBLEM

Despite the industrial disruption and technological advances that blockchain provides, one area that is still largely untapped is digital payments between buyers and sellers of physical services. Digital payment systems have been a holdout of larger industry incumbents, with more legacy APIs and agreements with traditional financial institutions, banks and credit cards.

Despite the advantages of crypto payments, such as ultra-low fees, speed and low barrier of entry, clear and developed advancement in transactional security has yet to be implemented to the market. Buyers desire and have come to expect a robust consumer protection system that protects their purchases and provides refunds. Sellers on the other hand would love to earn more revenue but are cautious of the volatility issues associated with accepting cryptocurrencies. Wouldn't it be amazing if we could have the best of both worlds? This is a mutual trust dilemma we aim to solve with the AIT platform.

## SOLUTION

**Identify Model**

**Replication**

**Rapid Growth**

Our aim is to build a next-generation payment system allowing buyers to use their favorite cryptocurrency to buy goods and utilise the services with confidence from merchants, incorporating a robust PayPal-like consumer protection and dispute resolution scheme. We aim to drive adoption of the API by merchants by providing them a way to receive fiat currency directly from cryptocurrency buyers, shielding the merchant from market volatility and decreasing the risk of accepting cryptocurrency.

## A Cross-Chain based BEP-20 coin with real utilities like an Exchange, Wallet, Ecommerce, and Blockchain Enthusiasts.

AIT COIN (AZY) is a peer-to-peer and utility digital coins with the purpose of catering to the community, rising through the charts, and catering a full blockchain ecosystem by introducing Staking, Farming, Ecommerce, Exchange, Digital Wallet, Next Gen NFTs and cross chain transaction in the future.

Our Utility coin AIT (AZY) is a Binance Smart Chain based BEP-20 compliant coin. As it is its own Smart Contract so we can encapsulate unique functionality that facilitates our Token Economics and business goals.

Fully decentralise digital finance company with blockchain ecosystem generating digital asset system. An asset exchange platform will be combined with strong crypto technology in collaboration with modern banking partners in an seamless digital ecosystem.

AIT Coin (AZY) is a utility coins that enables frictionless transactions of a wide range of assets on the <https://roboflo.exchange> whilst also acting as a medium of exchange and a store of value. In the future, coin holders may also be able to use the AIT Coins (AZY) to purchase from marketplace, buy/sell from AIT exchange and transfer or store at AIT wallet.

AIT will actively encourage its user base to participate as both players and community members. Users will be able to use their AIT Coins to participate in the governance of the AIT platform. By incentivizing a knowledgeable and engaged community, AIT can improve retention rates and ensure the platform grows in response to player feedback.

# BLOCKCHAIN TECHNOLOGY

AIT Coin is built on the BEP-20 standard, which enables AIT to work with most Binance wallets. Backed by the power of the Binance network, transactions happen quickly and with low transaction fees. Holders of AIT Coins are able to use industry standard wallets, including hardware wallets, to secure their holdings.

Because we are built on top of the standard Binance blockchain, AIT Coins will continue to advance as BSC network, including enhancements such as sharding and Proof of Stake (PoS). We believe binance smart chain is the ideal platform to support AIT Coins as it becomes a world class option for payments in Singapore.

Binance Smart Chain (BSC) was developed as a means of utilizing solidity based smart contract with much greater speed and efficiency than others. It's a sovereign blockchain, which will provide security and safety to all its users and developers.

Its a native dual chain interoperability will allow cross-chain communication and scaling of high-performance dApps that require a fast and smooth user experience. It's EVM compatible and will support all of existing binance smart chain toolings.

AIT is a crypto token native to the Binance Smart Chain (BSC) network. The amount of people using Binance Smart Chain has grown by several million this year alone. Quickly becoming a favorite network for both developers and users the BSC network is much faster and much cheaper (up to 50x cheaper) than the older Ethereum Network can be used in thousands of decentralized applications much more quickly.

Advantage of BSC is it's on-chain governance with POS authority consensus, build on 21 validators who validate the transaction, will provide decentralization and allow cross chain communication and scaling of high-performance Dapps.

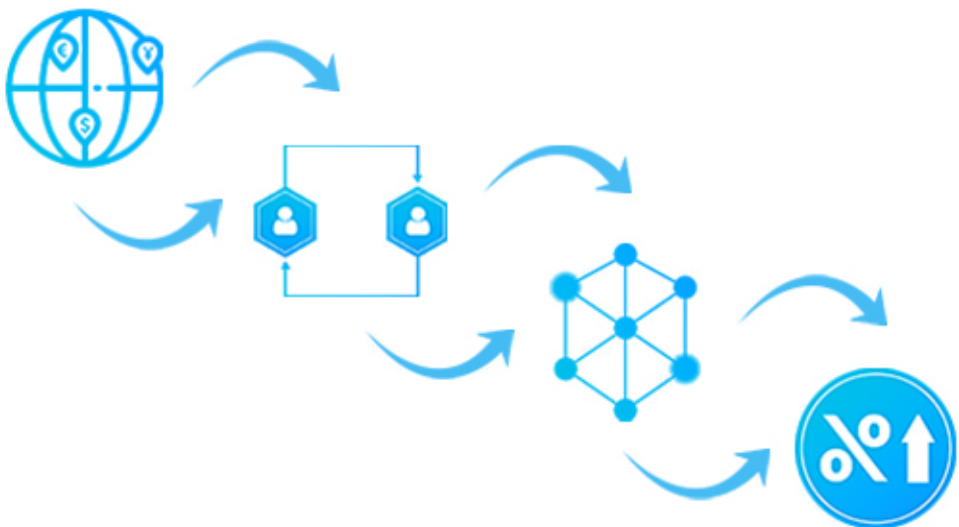

# BLOCKCHAIN TECHNOLOGY

The Binance Smart Chain platform is expected to provide for a transaction rate of over 10,000 transactions per second once the Proof of Stake Consensus Protocol in the Serenity Phase of BSC's roadmap development is deployed.

With the blockchain industry reaching its post-inception phase, many key technology foundations are now mature enough to build robust consumer-facing products reaching a wider audience. As with any new technology, blockchain is driving change in many areas of traditional business, forcing incumbents to adapt their more traditional business models.

From banking, insurance, equity trading, venture capital, logistics and governance, everyone is being affected, with new products redefining the way we think of money, transactions, value and trust. We have made great strides from the early days of bitcoin being traded in private forums, to exchanges and application platforms powered by smart-contracts.

Though we have already made significant advancements, this is just one stage in the digitalization of money. With the cryptocurrency market predicted to reach a sizable 5 trillion in the year 2025 according to major market analysts.

# TOKENOMICS

Unlike Bitcoin, AIT is a fixed supply coins with no new minting. All coins that will ever exist have already been created. We believe in a truly fair and decentralized world so launched 100% fair coins.

Token Name	AIT Coin
Token Symbol	AZY
Total Supply	2,000,000,000 (2B)
Blockchain	Binance Smart Chain
Decimal Value	6 Decimal
Technology	BEP-20
Contract	0x073fc4f847d6075077a8a2852a0bccdb852401f6

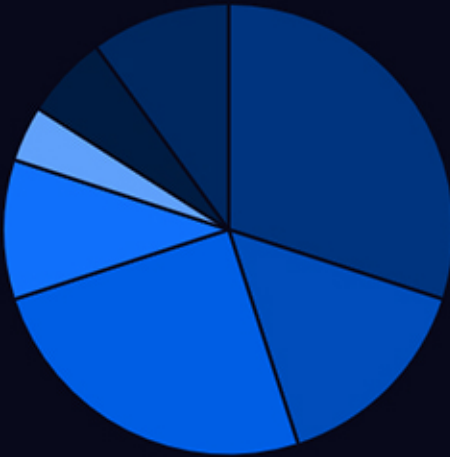

# AIT COIN

## TOKEN DISTRIBUTION

- PRE-SALE TOKENS ALLOCATION (30%)
- AWARDS & REWARDS (15%)
- STAKING ROUND (25%)
- TEAM & FOUNDERS (10%)
- ECOSYSTEM PARTNERS (4%)
- R & D FUND (6%)
- RESERVE FUND (10%)

## FUND ALLOCATION

- PRODUCT DEVELOPMENT (40%)
- BUSINESS PROMOTION (12%)
- MARKETING (20%)
- LEGALS & REGULATIONS (10%)
- PARTNERS & INVESTORS (6%)
- LICENCING & OPERATIONS (8%)
- CONTINGENCY (4%)

# ROADMAP

AIT Coins is developing a new blockchain technology rollout for the world.  
View our roadmap to see how exactly we are making that happen.

# ECOSYSTEM BUSINESS MODELS

An economic ecosystem of the future is based on blockchain technology, market-place and versatile payment options including AIT blockchain ecosystem.

AIT Coin will build this ecosystem through a process of constant self-assessment and development. Additionally, on-chain governance will be used to target and fund improvements. The community will have a strong say on which projects they want to see completed before updates are then launched on the network.

## AIT Payments

---

POS Crypto Payment Services, API for Crypto ATMs, Payment service provider API (similar to Paypal/ Bitpay). Developers can integrate AIT's platform payment services into their DApps. The goal of this functionality is to make any payment as easy as possible.

## AIT Exchange & Wallet

---

AIT is ready to launch it's own Crypto asset centralized exchange. Where users can but or sell, trade, swap, farming, staking, peer-to-peer of their cryptocurrencies. The team will be working closely with the BSC team to provide premium wallet services that will be optimized and expanded for the AIT platform's audience.

## Ecommerce Marketplace

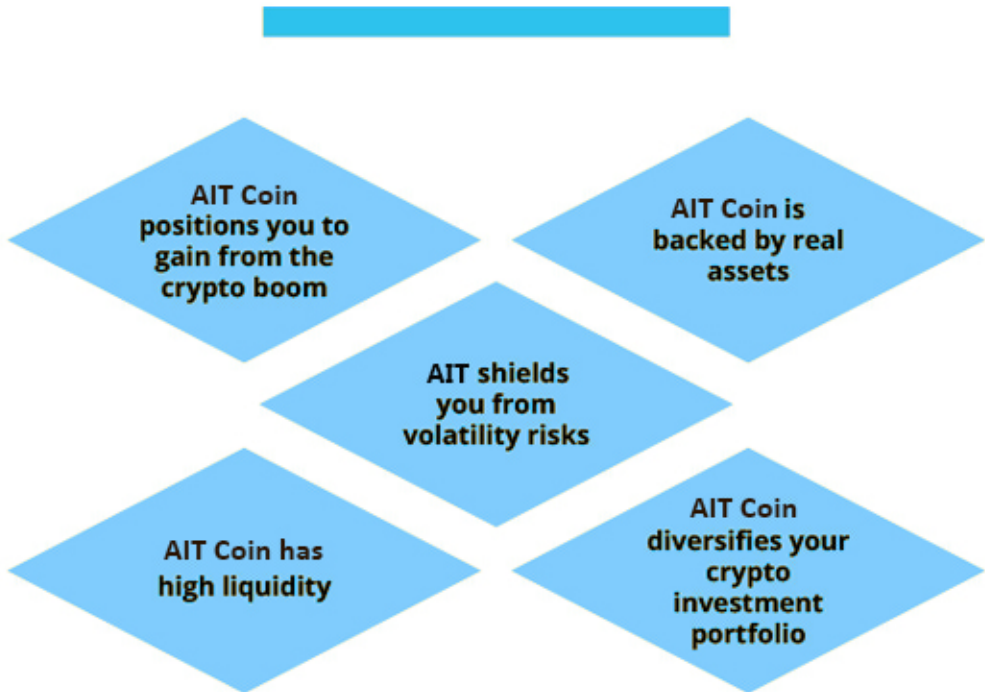

---

A complete secure Ecommerce platform, where you can buy anything from AIT Coins. Therefore, the team will design the AIT marketplace as an opportunity for all projects in the space to acquire users more efficiently.

# DISCLAIMER

To get involved with crypto,
